WELDING AUTOMATION  
LASER PROCESSING

[www.myrma.eu](http://www.myrma.eu)

## RMA

For several years we have been a leading supplier of **innovative and comprehensive solutions for the battery industry.**

We offer **tailor-made solutions**, as well as **ready-to-use machines, production lines and stations.** RMA is not a typical integrator – we focus primarily on the selection of optimal technology, we carry out advanced tests and support the development of the new products.

We conduct tests and research activities based on a **comprehensively equipped welding and material laboratory.** In addition to technological support for our external clients, we carry out advanced development works within the AIC S.A. group.

## Our Profile

- 15 years of experience in the field of automation and robotization of production
- Own material laboratory and Laser Application Center
- Professional R&D team specializing in laser processing
- Unique competencies in the field of solutions for the battery industry and e-mobility
- Internal Design Office and Assembly
- Synergy within the AIC S.A. group

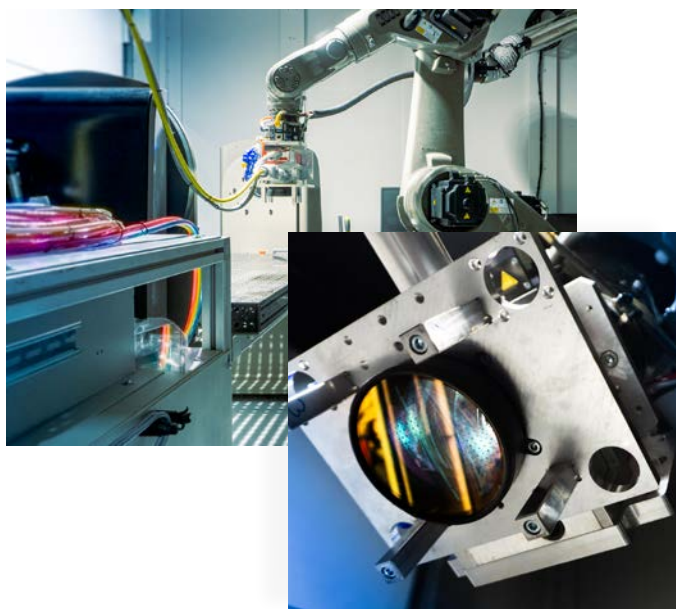

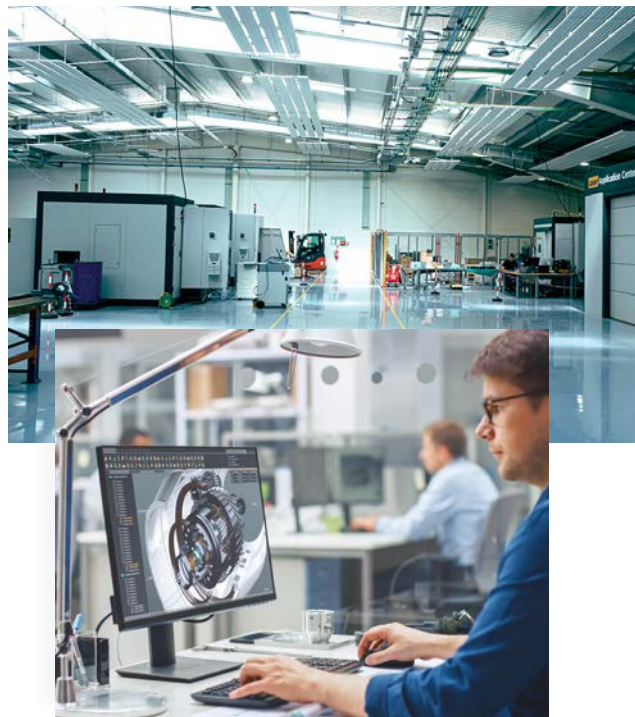

## Team

At RMA, our main asset is our people - a multidisciplinary team of experienced engineers and specialists. **Projects are fully implemented within the company** - from design and programming to assembly and commissioning.

Each project is supervised by a specialized and experienced project manager. All of this has allowed the RMA team to develop unique competencies in the field of automation and robotization of production over the years, which enable our clients to achieve a competitive advantage and measurable benefits.

We are a well-organized team that draws on experience but at the same time values diversity, innovation and the use of complementary competencies

## Market Segments

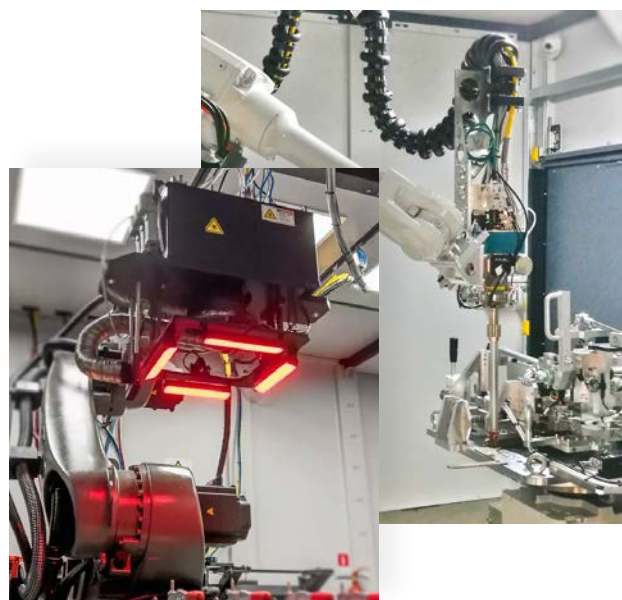

We focus primarily on solutions for the **battery industry** (laser welding, laser cleaning). We also create innovative solutions for the automotive segment (e-mobility).

**If you're unsure whether laser processes can be a good alternative in your production area, just contact us!**

## Scope

In our offer, you can mainly find **advanced solutions used in the field of laser welding**. As part of our activity, we also carry out advanced projects in the area of **3D laser cutting, laser structuring and laser cleaning**.

The projects implemented over the years have made us believe that more and more companies are inclined to use laser sources in their production.
